### **DETAILED ACTION**

## Response to Amendment

- 1. Claims 8-13 are pending in this application.
- 2. Examiner acknowledges applicant's amendment on 11/09/2009.
- 3. Claims 8, 11-13 have been amended on 11/09/2009.
- 4. Claims 1-7 have been cancelled by the applicant.
- 5. Applicant's arguments filed 11/09/2009, with respect to claims 8-13 have been fully considered but they are not persuasive, for examiner's response see discussion below.

## Claim Objections

6. In view of the amendments, the claim objections are being withdrawn.

## Claim Rejections – 35 USC § 112

7. In view of the amendments the rejections of Claims 8, 11-13 under 35 U.S.C. 112, first paragraph is withdrawn.

Art Unit: 2164

## Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 9. Claims 8-13 of the current application (effective filing date: Dec. 9, 2005) are rejected under 35 U.S.C. 103(a) as being unpatentable over David et al. (US 20020131764; filing date: Dec. 04, 2001), hereinafter "David" in view of Takagi et al. (US 20030085997; fling date: May 07, 2002), hereinafter "Takagi" and further in view of Um et al. (US 20030138236; filed: Jan. 14, 2003) hereinafter "Um".
- 10. Claims 1-7 have been cancelled by the applicant.
- 11. As to claim 8, David discloses, information process apparatus that manages data recorded on a disc shaped record medium (abstract), comprising:

information obtainment means for obtaining reproduction information necessary to reproduce the data when the data are recorded, said data being low resolution data and video and audio data for each clip ([0003], records audio/video; [0236], metadata which includes clips may contain resolution information);

generation means for generating a <u>plurality of management files</u> with which data that compose each clip that is a predetermined structural unit of data are managed ([0049]-[0050]), the first management file describing for one clip

- (1) the reproduction information of data that compose the clip ([0091]; [0110], clips are recorded with identifiers; [0115]) and
- (2) an identifier that uniquely identifies data that compose the clip ([0091], unique identifiers identify each clip; [0110]; );

registration means for all clips composed of (a) the reproduction information of data that compose each clip ([0128]), (b) the unique identifier of data that compose each clip, and (c) information that represents the recorded position of data that compose the clip to a second an index management file with which clips and edit lists recorded on the record disc medium are totally managed (abstract; [0011]-[0016]; [0056]; [[0303]) and

successive reproduction means for successively reproducing data that compose all the clips recorded on the record <u>disc</u> medium in an order of recordation according to the <u>first clip</u> management file or the <u>second index</u> management file, wherein when the record <u>disc</u> medium is loaded, the <u>second index</u> management file is read from the

record <u>disc</u> medium and stored to a memory and when a clip to be reproduced is designated, the <u>first clip</u> information file is read from the record medium and stored to the memory ([0057]-[0058]).

Although, David discloses updating clips, David, however, does not explicitly disclose, "registration means for updating management information";

Although, David discloses creating clips and storing them with index, David does not explicitly disclose clip management file or index management file.

Takagi, on the other hand, explicitly discloses, "registration means for updating management information" (abs. lines 9-12, tags specifying registered metadata).

Um, on the other hand, explicitly discloses clip management file or index management file (Um: [0035]; management file includes thumbnails and index).

David, Um and Takagi are of the same field of endeavor, they specifically teach program preparation and distribution system (David: [0039]; Takagi: abstract, lines 1-3; Um: [0029]).

Application/Control Number: 10/560,153

Page 6

Art Unit: 2164

It would have been obvious to one of the ordinary skill in the art at the time of applicant's invention to incorporate the teachings of Takagi and Um into David of identifying, recording and reproducing information that would have allowed users of David to have a useful method, to have a sequence of operations from acquisition, formulation until editing, transmission and archiving (Takagi: [0004]; Um: [0025]).

- 12. As to case 9, David as modified discloses, the information process apparatus as set forth in claim 8, wherein the registration means registers the management information of the clip to the last end of the second index management file (David: [0110]-[0112]; [0115]; [124]; [0158]-[0163]).
- 13. As to claim 10, David as modified discloses, the information process apparatus as set forth in claim 8, further comprising: reproduction means for reproducing data that compose the clip according to the first management file or the second-index management file (David: [0003]).
- 14. As to claim 11, the claim can be rejected for the same reason as claim 8. In addition, David discloses, an information process method of managing data recorded on a record medium (abstract), comprising the steps of:

obtaining reproduction information necessary to reproduce the data when the data are recorded; said data\_being low resolution of data and video and audio data\_for each clip ([0003]; [0236]);

generating a <u>plurality of clip</u> management <u>files</u> with which data that compose each clip that is a predetermined structural unit of data are managed ([0049]-[0050]), the <u>first clip</u> management file describing <u>for each clip</u>

(1)\_the reproduction information of data that compose the clip ([0091]; [0110]; [0115]) and

(2) an identifier that uniquely identifies data that compose the clip ([0110]);

updating management information for all clips composed of (a) the reproduction information of data that compose each clip, (b) the identifier of data that compose the clip, and (c) information that represents the recorded position of data that compose the clip to a second an index management file with which all clips and edit lists recorded on the record medium are totally managed ([0049]-[0050]; [0091]; [0110]; [0115])); and

successively reproducing data that compose all the clips recorded on the record disc medium in an order of recordation\_according to the first clip management file or the second index management file, wherein when the record medium is loaded, the second

index management file is read from the record disc medium and stored to a memory and when a clip to be reproduced is designated, the first-clip management file is read from the record disc medium and stored to the memory ([0057]-[0058]; [0303]).

David, however, does not explicitly disclose, "registration means for updating management information";

David also does not explicitly disclose clip management file or index management file.

Takagi, on the other hand, explicitly discloses, "registration means for updating management information" (abs. lines 9-12).

Um, on the other hand, explicitly discloses clip management file or index management file (Um: [0010]; [0035]).

David, Um and Takagi are of the same field of endeavor, they specifically teach program preparation and distribution system (David: [0039]; Takagi: abstract, lines 1-3; Um: [0029]).

It would have been obvious to one of the ordinary skill in the art at the time of applicant's invention to incorporate the teachings of Takagi and Um into David of identifying, recording and reproducing information that would have allowed users of David to have a useful method, to have a sequence of operations from acquisition, formulation until editing, transmission and archiving. (Takagi: [0004]; Um: [0025]).

15. As to claim 12, the claim can be rejected for the same reason as claim 8. In addition, David discloses, a program record <u>disc shaped record</u> medium on which a computer readable program is recorded, the program causing a computer to perform an information process that manages data recorded on a record <u>disc medium</u> (abstract), the program comprising the steps of:

obtaining reproduction information necessary to reproduce the data when the data are recorded, data being low resolution data and video and audio data for each clip ([0003]; [0236]);

generating a <u>plurality of clip</u> management <u>files</u> with which data that compose each clip that is a predetermined structural unit of data are managed, the <u>first clip</u> management file describing <u>for each clip</u>

(1) the reproduction information of data that compose the clip ([0091]; [0110]; [0115]) and

(2) an identifier that uniquely identifies data that compose the clip ([0110]);

updating management information for all clips\_composed of (a) the reproduction information of data that compose each clip, (b) the unique identifier of data that compose each clip, and (c) information that represents a recorded position of data that compose each clip to a second an index management file with which clips and edit lists recorded on the record medium disc are totally managed; and

successively reproducing data that compose all the clips recorded on the record disc medium in an order of recordation according to the first clip management file or the second index management file wherein when the record disc medium is loaded, the second index management file is read from the record disc medium and stored to a memory and when a clip to be reproduced is designated, the first clip management file is read from the record disc medium and stored to the memory (abstract; [0011]-[0016]; [0056]; [0303]).

David, however, does not explicitly disclose, "registration means for updating management information";

David also does not explicitly disclose clip management file or index management file.

Takagi, on the other hand, explicitly discloses, "registration means for updating management information" (abs. lines 9-12).

Um, on the other hand, explicitly discloses clip management file or index management file (Um: [0010]; [0035]).

David, Um and Takagi are of the same field of endeavor, they specifically teach program preparation and distribution system (David: [0039]; Takagi: abstract, lines 1-3; Um: [0029]).

It would have been obvious to one of the ordinary skill in the art at the time of applicant's invention to incorporate the teachings of Takagi and Um into David of identifying, recording and reproducing information that would have allowed users of David to have a useful method, to have a sequence of operations from acquisition, formulation until editing, transmission and archiving. (Takagi: [0004]; Um: [0025]).

16. As to claim 13, the claim can be rejected for the same reason as claim 8. In addition, David discloses, a computer-implemented program that causes a computer to perform an information process that manages data recorded on a record <u>disc</u> medium (abstract), the program comprising the steps of:

obtaining reproduction information necessary to reproduce the data when the data are recorded said data being low resolution of the data and audio and video data for each clip ([0003]; [0236]);

generating a <u>plurality of clip</u> management <u>file</u> with which data that compose each clip that is a predetermined structural unit of data are managed ([0049]-[0050]), the <u>first clip</u> management file describing <u>for each clip</u> (1) the reproduction information of data that compose the clip and <u>(2)</u> an identifier that uniquely identifies data that compose the clip ([0110]);

updating management information for all clips composed of (a) the reproduction information of data that compose each clip, (b) the unique identifier of data that compose each clip ([0128]), and (c) information that represents the recorded position of data that compose each clip to a second an index management file with which all clips and edit lists recorded on the record medium are totally managed; and

successively reproducing data that compose all the clips recorded on the record disc medium in an order of recordation according to the first clip management file or the second index management file wherein when the record disc medium is loaded, the second index management file is read from the record disc medium and stored to a

memory and when a clip to be reproduced is designated, the first clip management file is read from the record disc medium and stored to the memory ([0057]-[0058]; [0303]).

David, however, does not explicitly disclose, "registration means for updating management information";

David also does not explicitly disclose clip management file or index management file.

Takagi, on the other hand, explicitly discloses, "registration means for updating management information" (abs. lines 9-12).

Um, on the other hand, explicitly discloses clip management file or index management file (Um: [0010]; [0035]).

David, Um and Takagi are of the same field of endeavor, they specifically teach program preparation and distribution system (David: [0039]; Takagi: abstract, lines 1-3; Um: [0029]).

It would have been obvious to one of the ordinary skill in the art at the time of applicant's invention to incorporate the teachings of Takagi and Um into David of identifying, recording and reproducing information that would have allowed users of David to have a useful method, to have a sequence of operations from acquisition, formulation until editing, transmission and archiving. (Takagi: [0004]; Um: [0025]).

#### Prior art made of record

17. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Burke (US 20040070594) teaches method and apparatus for programme generation and classification.

Ginter et al. (US 20030088784) teach systems and methods for secure transaction management and electronic rights protection.

# Response to Arguments

18. Applicant's arguments filed 11/09/2009, with respect to claims 8-13 have been fully considered but they are not persuasive, for examiner's response see discussion below.

**Applicant's arguments:** This amendment responds to the Office Action dated January 25, 2008, in which the Examiner rejected claims 8-13 under 35 U.S.C. § 103. Claim 8 claims an information processing apparatus, claim 11 claims an information process method, claim 12 claims a program record medium on which a program is recorded and causes a computer to perform an information process, and claim 13 claims a program causing a computer to perform an information process. The apparatus, method, medium and program obtain reproduction information necessary to reproduce data when the data is recorded. The reproduction information is setup information about resolution of the data and encoding of the data. A first management file is generated describing (a) the reproduction information and (b) a unique identifier that composes a clip. A second information file is registered in which management information of clips recorded in the recording medium are totally managed. The second management file is composed of the reproduction information, the unique identifier and information representing the recorded position of the data that compose the clip. Reproduction data that compose all the clips are successively reproduced according to the first or second management file. When a recording medium is loaded, the second management file is read from the recording medium and stored to a memory. When the clip is to be reproduced, the first management file is read from the recording medium and stored to the memory. By obtaining setup information about resolution and encoding of the data, by generating and registering first and second management files and by reading a second management file when a recording medium is loaded and

Art Unit: 2164

reading a first management file when a clip is to be reproduced as claimed in claims 8 and 11-13, the claimed invention provides an apparatus, method, medium and program in which information necessary to reproduce data can be obtained guickly and without a time lag. The prior art does not show, teach or suggest the invention as claimed in claims 8 and 11-13. Claims 8-13 were rejected under 35 U.S.C. § 103 as being unpatentable over David, et al. (U.S. Publication No. 2002/0131764) in view of Takagi, et aL (U. S. Publication No. 2003/0085997). David, eL al appears to disclose recording audio and/or video information signals onto a recording medium [0003]. Nothing in David, et al. shows, teaches or suggests obtaining setup information about resolution and encoding of the data as claimed in claims 8 and 11-13. Rather, David, et al. only discloses recording audio and/or video information signals onto a recording medium. Also, David, et al. merely discloses arranging metadata objects into a plurality of categories and recording the metadata objects in accordance with the categories [0049 - 0050]. Thus, David, et aL only discloses recording metadata objects into categories. Nothing in David, et al. shows, teaches or suggests a first management file describing (a) setup information about resolution and encoding and (b) a unique identifier as claimed in claims 8 and 11-13. Rather, David, et al. only discloses recording metadata objects into categories. Furthermore, David, et al. merely discloses first identifiers which are not unique but needed to distinguish pieces of material on a medium and second identifiers which are unique identifiers [0011 -0016]. Nothing in David, et al. shows, teaches or suggests a second management file for totally managing clips recorded on a recording medium including (a) setup

information about resolution and encoding of the data, (b) a unique identifier, and (c) an information that represents a recorded position of data as claimed in claims 8 and 11-13. Rather, David, et al. merely discloses first and second identifiers. Finally, nothing in David, et al. shows, teaches or suggests when a record medium is loaded a second management file is read and when a clip is to be reproduced, a first management file is read as claimed in claims 8 and 11-13.

**Examiner's response:** As mentioned in this office action, although, David does not explicitly disclose, "registration means for updating management information" and although David also does not explicitly disclose clip management file or index management file. Takagi, on the other hand, explicitly discloses, "registration means for updating management information" (abs. lines 9-12). Um, on the other hand, explicitly discloses clip management file or index management file (Um: [0010]; [0035]). David, Um and Takagi are of the same field of endeavor, they specifically teach program preparation and distribution system (David: [0039]; Takagi: abstract, lines 1-3; Um: [0029]). It would have been obvious to one of the ordinary skill in the art at the time of applicant's invention to incorporate the teachings of Takagi and Um into David of identifying, recording and reproducing information that would have allowed users of David to have a useful method, to have a sequence of operations from acquisition, formulation until editing, transmission and archiving. (Takagi: [0004]; Um: [0025]). David discloses in paragraph [0236], in operation one of the editing terminals 184 is arranged to access the metadata database 176 via the low band width communications

channel 182' the editing terminal 184 is therefore provided with access to the metadata 210 describing the content of the audio/video material recorded onto the tape 216.

The metadata 210 may include such as the copyright owner "BSkyB", the resolution of the picture and the format in which the video material is encoded, the name of the program, which is in this case "Grandstand", and information such as the date, time and audience. Metadata may further include a note of the content of the audio/video material.

Applicant's arguments: Takagi et al. appears to disclose metadata input at a planning processing and at a casting process is registered in a database managed in a concentrated fashion by an archival manager at the same time as a tag specifying the registered metadata is issued (Abstract). Thus, Takagi, et al. merely discloses registering metadata into a database. Nothing in Takagi, et al. shows, teaches or suggests (a) a second management file which totally manages clips recorded on a record medium, (b) the second management file composed of (i) setup information about resolution and encoding of the data, (ii) a unique identifier and (iii) information that represents a recorded position, (c) reading a second management file when a record medium is loaded and reading a first management file when a clip is to be reproduced, (d) obtaining setup information about resolution and encoding of data and (e) a first management file describing (i) setup information and (ii) a unique identifier as claimed in claims 8 and 11-13. Rather, Takagi, et al. merely discloses registering metadata into a database.

A combination of David, et al. and Takagi, et al. would merely suggest to store the metadata of David, et al. into the database of Takagi, et al. Thus, nothing in the combination of the references shows, teaches or suggests (a) obtaining setup information about resolution and encoding of data, (b) generating a first management file describing setup information and a unique identifier, (c) a second management file composed of the setup information, unique identifier and information about a recorded position, and (d) reading the second management file when a record medium is loaded and reading a first management file when a clip is to be reproduced as claimed in claims 8 and 11-13. Therefore, Applicants respectfully request the Examiner withdraws the objection to claims 8 and 11-13 under 35 U.S.C. § 103.

Examiner's response: As explained earlier in the office action, David discloses, information process apparatus that manages data recorded on a record medium (abstract), comprising: information obtainment means for obtaining reproduction information necessary to reproduce the data when the data are recorded, said reproduction information being setup information about resolution of the data and encoding of the data ([0003]; [0236]); generation means for generating a first management file with which data that compose each clip that is a predetermined structural unit of data are managed ([0049]-[0050]), the first management file describing (a) the reproduction information of data that compose the clip ([0091]; [0110]; [0115]) and (b) an identifier that uniquely identifies data that compose the clip ([0110]);

Art Unit: 2164

registration means for registering management information of the clip composed of (a) the reproduction information of data that compose the clip ([0128]), (b) the unique identifier of data that compose the clip, and (c) information that represents the recorded position of data that compose the clip to a second management file with which clips recorded on the record medium are totally managed (abstract; [0011]-[0016]; [0056]; [[0303]) and successive reproduction means for successively reproducing data that compose all the clips recorded on the record medium according to the first management file or the second management file, wherein when the record medium is loaded, the second management file is read from the record medium and stored to a memory and when a clip to be reproduced is designated, the first management file is read from the record medium and stored to the memory ([0057]-[0058]). David, however, does not explicitly disclose, "registering management information"; Takagi, on the other hand, explicitly discloses, "registering management information" (abs. lines 9-12).

Applicant's arguments: Claims 9-10 depend from claim 8 and recite additional features. Applicants respectfully submit that claims 9-10 would not have been obvious within the meaning of 35 U.S.C. § 103 over David, et al. and Takagi, et al. at least for the reasons as set forth above. Therefore, Applicants respectfully request the Examiner withdraws the rejection to claims 9-10 under 35 U.S.C. § 103. The prior art of record, which is not relied upon, is acknowledged. The references taken singularly or in combination do not anticipate or make obvious the claimed invention. Thus it now

Art Unit: 2164

appears that the application is in condition for a reconsideration and allowance.

Reconsideration and allowance at an early date are respectfully requested.

**Examiner's response:** The dependent claims are also being rejected for the same reasons as specified in the independent claims.

### Conclusion

19. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

#### **Contact Information**

20. Any inquiry concerning this communication or earlier communications from the examiner should be directed to FAZLUL QUADER whose telephone number is (571)270-1905. The examiner can normally be reached on M-F 8-5 Alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Rones can be reached on 571-272-4085. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
